

The type of Flowcharts is discussed below:

1) Process Flowcharts:

This flowchart shows the steps which is involved in a Particular Process.

Process flowcharts or Process diagrams are generally used in business and industrial settings to analyze and improve processes.

This flowchart is used in business product modeling to help understand employees about the project requirements and gain some insight into the project.

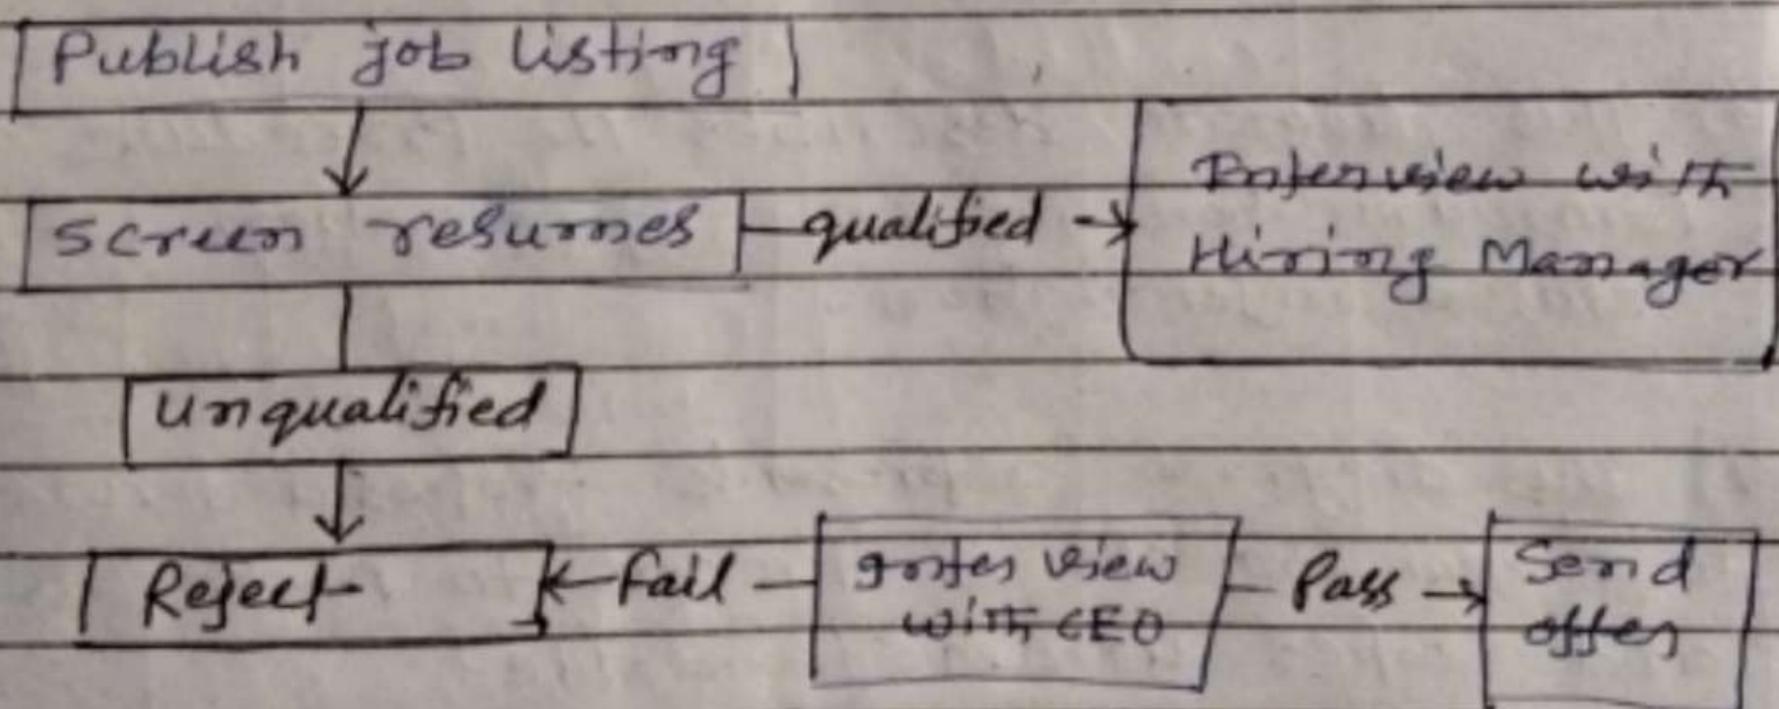

Fig. Hiring Process Flowchart

This gives readers the opportunity to learn how a process works or how a project is planned. We can also say that Mapping

VKSU

can quickly explain about how things get done through the entire procedure. This is applicable in the notation or standard language like the Business Process Modeling.

In general, a process diagram can help with the following:

- 1) This diagram represents the roles and responsibilities of members within an organization with the aim of gaining clarity.
- 2) This diagram shows inputs or the manufacturing process to create the finished products.
- 3) This diagram describes the procedure of communication in an organization with related information.
- 4) This diagram represents proposal forward to a new project or process to make its steps and scopes understandable.
- 5) It will show how a person wakes up in the morning etc.

2) Workflow Diagram :

The workflow chart shows how ~~is~~ a process or business functions. It helps readers in understanding the flow of documents and data in an organization or it helps in employee training programs. It is used for discovering all potential problems in a flow.

For examples, The diagram depicts the crucial steps that customers need to follow to renew the policy through the website.

Furthermore, the chart is also helpful for employee training programs. People use ~~it~~ it to discover all potential problems in a flow, too.

It is useful for establishing or creating new standards for the operating ~~people~~ ~~use it to~~ procedure. It is an excellent choice for providing a comprehensive overview of the business operation.

3) Swimlane Flowchart :

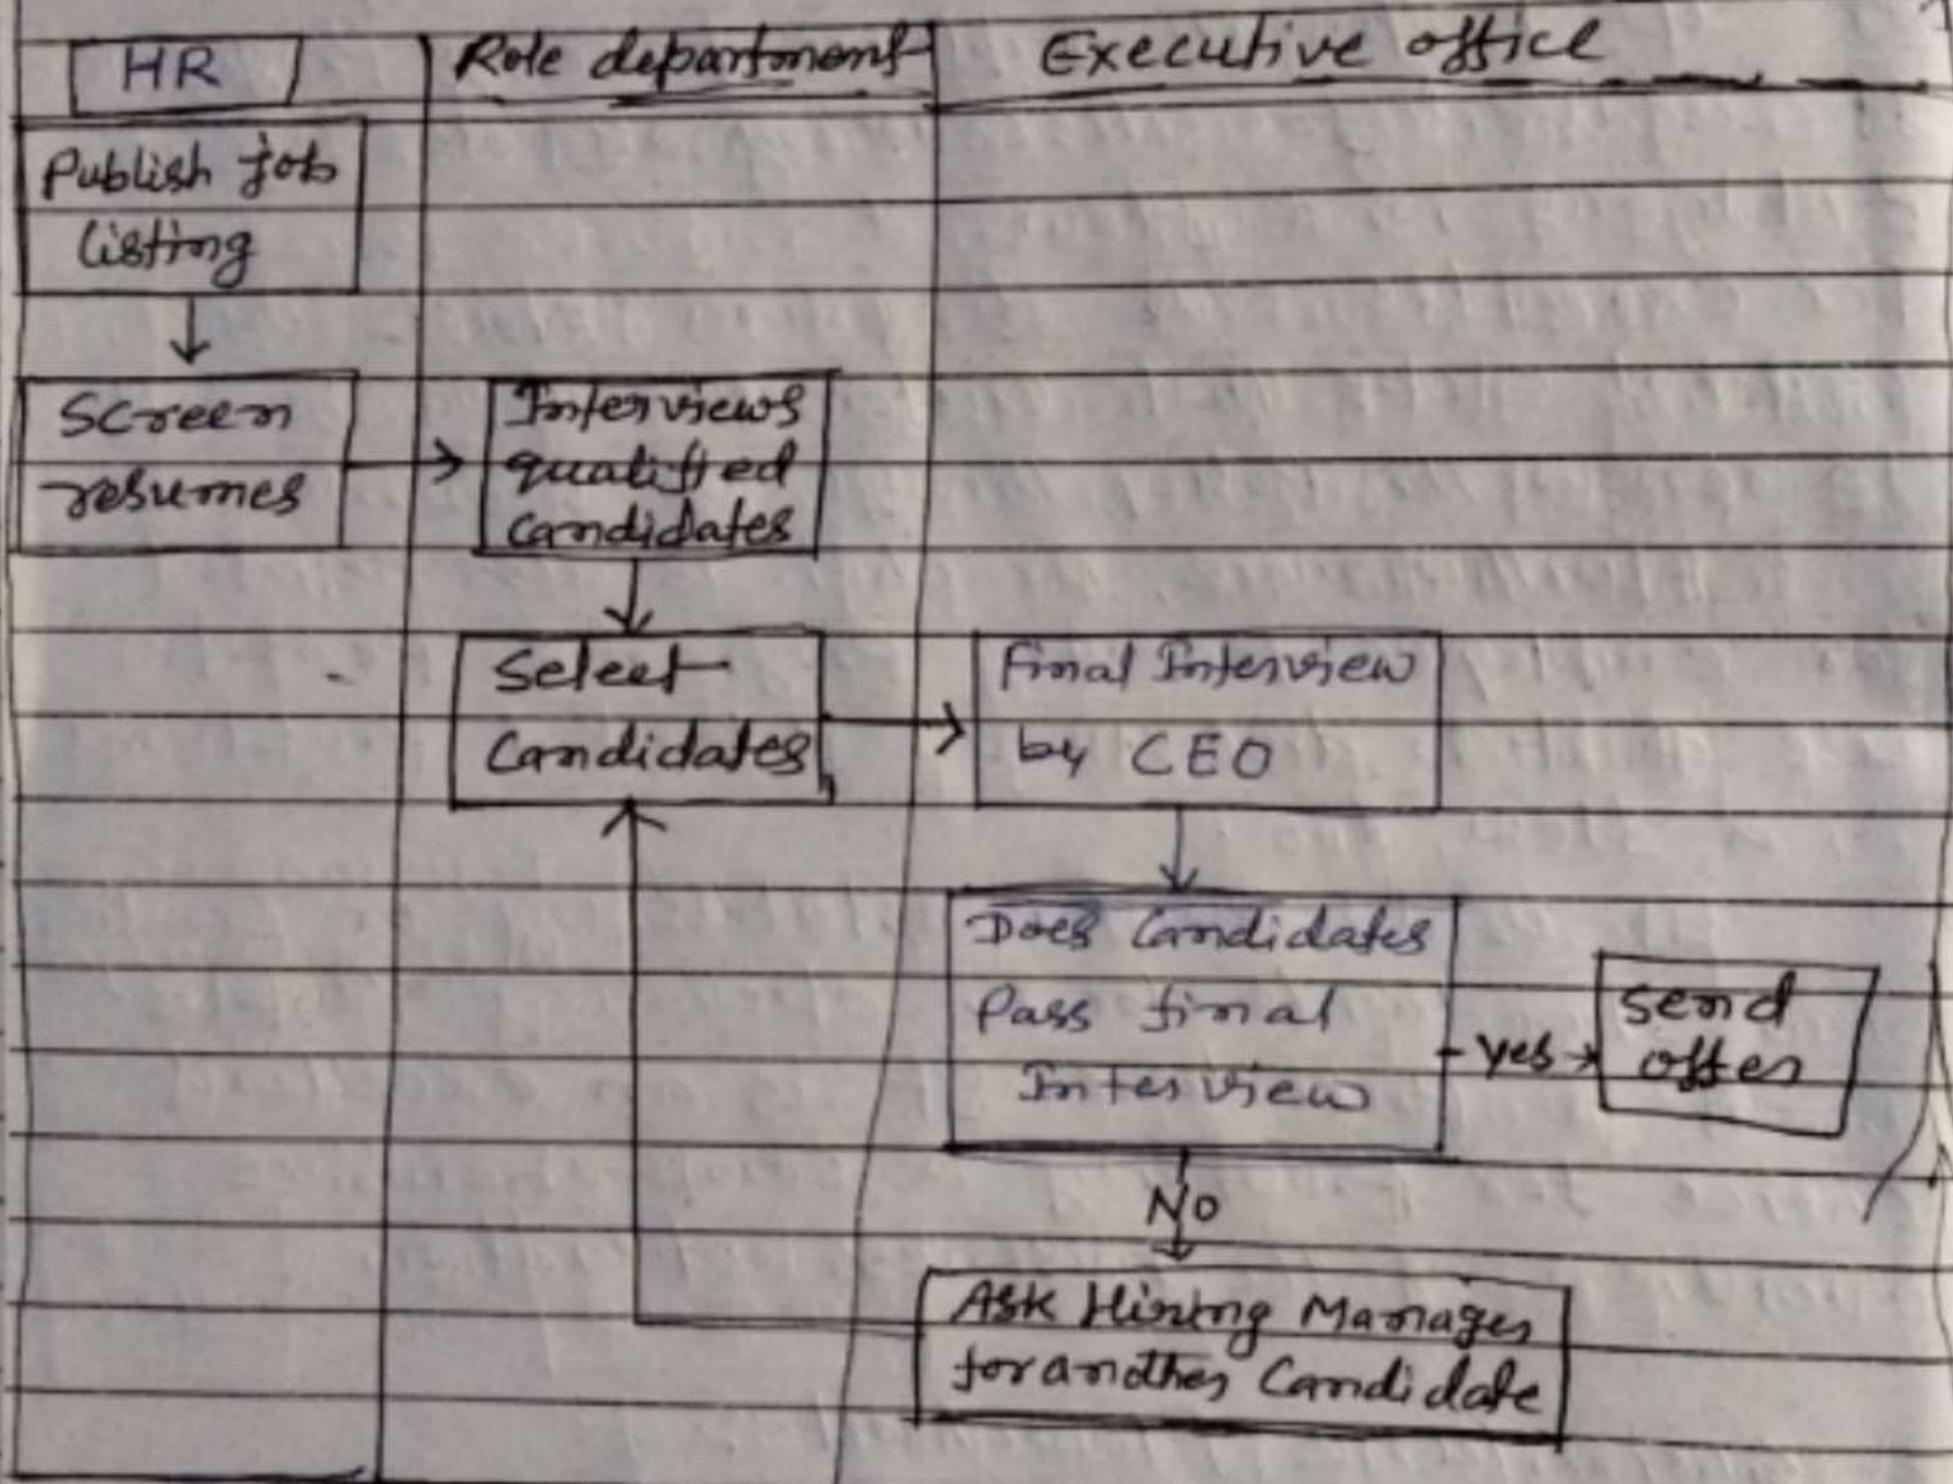

The swimlane diagram proves its potential at the time of describing how a separate procedure, employee or department interacts. We can also say that swimlane

VKSU

Can help represent multiple information flows
Side by side.

Swimlane Flowchart figure

VKSU

The Swimlane chart is similar to the workflow chart. In Swimlane chart, creators can show numerous categories in which the activities take place.

A typical swimlane chart is frequently beneficial to document a flow interacting with various segments. Furthermore, it also functions to depict a collaboration involving various teams.

It also shows its effectiveness with the more complicated form. There could be more than five lanes in total. For example, the chart defines numerous departments in an organization and every department is responsible for multiple functions. The swimlane diagram has a clear cut lane for each person, group, department etc.
